

# Network Printer Management

## Streamlined Installation on Any Network

Installing a TallyGenicom line printer on your network has never been easier, simply attach the printer to the network via a 10/100Base-T Ethernet connection and turn the printer on. The printer will be located through an advanced discovery process. This process can be run from anywhere on the network – across the room or across the globe – and completely eliminates the need to configure an IP address or provide any other information. The printer is then immediately available for configuration and operation – it's that easy.

## A Complete Solution to Meet Your Unique Needs

TallyGenicom's Network Printer Management combines an impressive set of standard networking protocols to address a wide variety of user needs. Install, configure and manage your TallyGenicom printers using the industry standard management tool, HP Web JetAdmin. Also provided by TallyGenicom is WebPanel – an "on-screen" control panel identical to the one on the printer. This virtual control panel allows remote control configuration, status and messaging from the users desktop as though he were actually standing in front of the printer. Because WebPanel runs in any standard Web browser, there is no need to install custom applications that may interfere with your operating system or other loaded applications.

## Security for Your Network - Guaranteed!

TallyGenicom's Network Printer Management protects your interests with configurable access to network printers through password protection. This password protection ensures the integrity of your printer configurations by impeding unauthorised changes.

Feature	Benefit
WebPanel	Access to all configuration and status of printer from the user's desktop
Immediate notification of custom defined printer events	Eliminated loss of productivity
Password protection of printer configuration	Guaranteed configuration stability and output quality
Full MIB II and Printer MIB implementation	Compatibility with industry standard printer and console management
Automated discovery locates printers on the network	No need to enter each device into a database
Organize printers into logical groups by department or location	Simplify management and monitoring
Compatibility with industry network printer management tools	No need to install custom application on each workstation
Simplified installation process	Reduction in cost of ownership

# Network Printer Management

## Features & Specifications

Technology

### Lower your total cost of ownership with TallyGenicom Network Printer Management

#### At Installation -

- Fast automated installation of printer driver
- Use industry standard, server based network management tools - no need to install a custom application on each workstation.
- Automated discovery locates printers on the network without manually entering each device into a database
- Easily organize printers into logical groups by department or location

#### During Operation -

- Monitor status
- No special network requirements – simply enter email address
- Immediate notification of paper empty, paper jams or hardware failure eliminates downtime.
- Monitor workload and predict consumable usage levels

#### Throughout your entire organisation -

- Route print jobs based on resource availability
- Ensure maximum "up-time"
- Email notification recipients can be configured selectively by event

Discover your printers at installation...

Configure them to meet your unique application requirements...

Monitor their status and workload...

All from any standard network browser!
