

Production Ink Comparison Chart

T3010
T3110
T3010S

Production ink technology offers users all the advantages of impact technology printing but with consistent print quality and very quiet operation. TallyGenicom's production ink printers should not be confused with small desktop inkjet printers used in the home/office environment. The T3010 family of printers are designed for use in applications more usually associated with fast dot matrix, line printer or thermal technologies. As long as multi-part stationary is not a requirement, these printers will do all that impact printers will do but at near silent operation. Low running costs (similar to impact technology), quiet operation supported with a wide range of media and fast printing summarise the benefits of these printers.

The products offer a full range of automatic features for optimum print quality and reliability, with minimum user intervention.

They have been accredited by APACS for secure cheque in fill printing, offering users a much lower cost alternative to specialist laser printing.

	T3010	T3110	T3010S
Print speed - characters per second (cps)	820cps	820cps	820cps
Workload - pages per month	36,000ppm	36,000ppm	36,000ppm
Column width	80 column	136 column	80 column
Cutting device	No	No	Yes
