

# PlanetPress Watch

What you need.

## Where you need it

Document destination automation

From small businesses to worldwide enterprises, the output management of transactional and variable content documents just got easier.

Be more competitive by streamlining your document distribution workflow. Reduce costs and increase efficiency by delivering your documents to their intended recipients using print, email or fax.

PlanetPress Watch is your gateway to automated local and remote printing, integrated PDF, TIFF and JPG generation for archiving, emailing and faxing\* – all with no human intervention.

### Benefits

- Implement a fully automated document distribution workflow
- Capture and process data from almost any source
- Simultaneously print, email, fax and archive documents
- Route through user-defined business rules

### Workflow Features

**Capture data.** From one central location, PlanetPress Watch can capture data streams from almost any source: shared folders, LPD, the Internet, Windows print queues, serial input, emails, FTP, ODBC compliant databases, Telnet and more.

**From data to documents.** PlanetPress Watch looks at the data and routes it to the appropriate device to output the right document. The data can also be processed to be split into several files, to search and replace items, to query ODBC compliant databases for additional information, for business rules to be applied or to be conditionally redirected.

**Distribute your documents.** Print at optimum speed on local/remote PostScript printers; send documents to companion products to create electronic versions, email, fax and archive them. Automatically post a digital version of your documents on the web or on your FTP server.

## Features & Specifications

PlanetPress

**Visual representation of workflow.** Easily track where individual data streams are routed and the outcome of the output. No coding required!

**Bidirectional communication.** Use SNMP conditions to reroute the data if the printer is off-line, out of paper, etc.

**Windows service.** PlanetPress Watch runs as a Windows service for enhanced security and peace of mind.

**Trigger Intelligent Documents.** Intelligent Documents created with PlanetPress can be triggered automatically according to the data stream.

**Numerous data sources.** Data can be captured from the host via LPR, Windows print queues, shared folders, email messages (Outlook and POP3), ODBC compliant databases, Telnet, FTP and Raw Socket printing.

**Conditional routing and output.** Set business rules based on the contents of the data, its file name, size, or else to route the documents to printers, email and/or fax recipients, archive or shared folders.

**Job splitter.** Set rules to split single jobs into several data streams based on values or characters found in the data.

**Output options.** Data or digital documents can be sent to LAN/WAN/Desktop printers, folders, FTP sites, email or fax recipients and TCP/IP addresses.

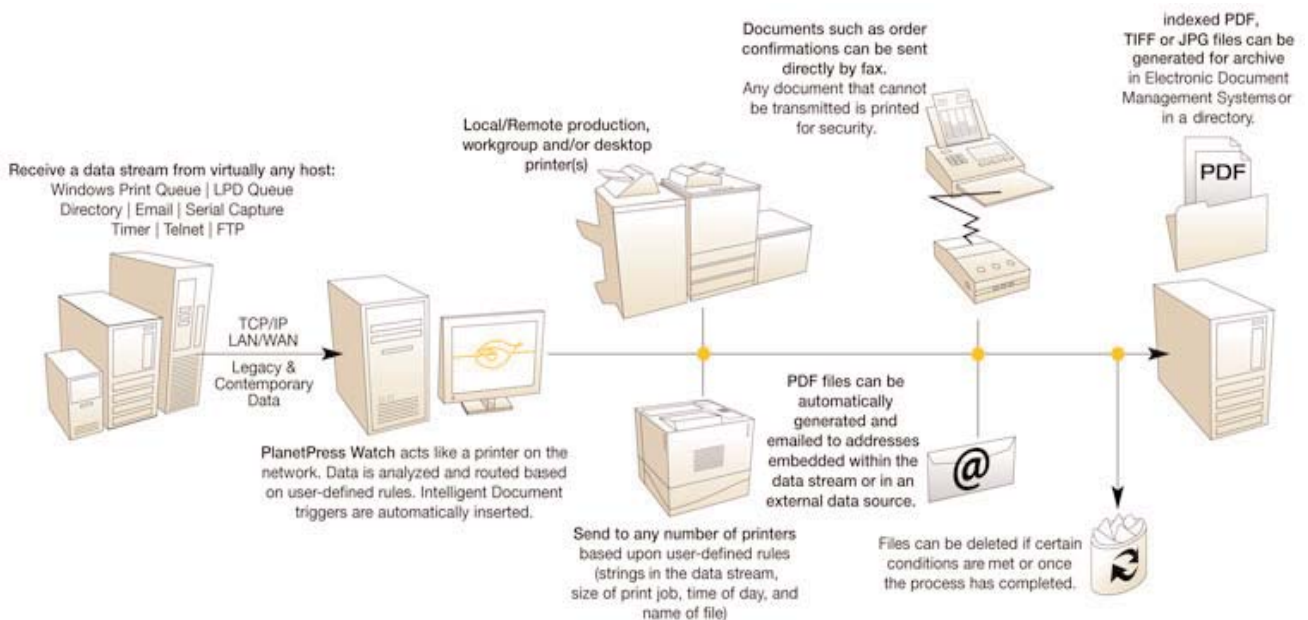

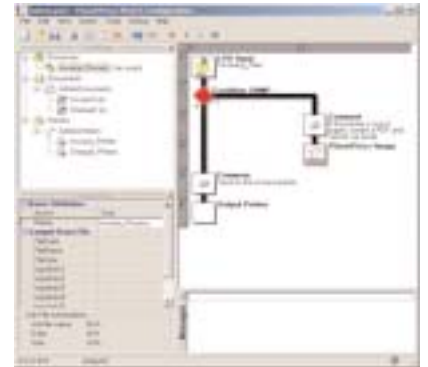

**Cluster printing.** Automatically distribute PlanetPress Intelligent Documents to clusters of printers. Perform queue balancing, round robin or job splitting for greater speed and efficiency.

**Reprints.** Backup all print jobs for a user-defined period, allowing for reprints.

**Extended scripting capabilities.** Use any ActiveScript language (VBScript, JScript, PerlScript, etc.) installed on your system to further process your data.

**Extended logging capabilities.** Each job is logged. PlanetPress Watch interfaces with the Windows Event logs to provide valuable information helping you with the ongoing development of your operation.

**Documentation and online help.** Comprehensive documentation structured to make learning and using all modules easy, efficient and practical.
